

Parkinson's is the **world's fastest growing** neurological condition affecting **219,000** Australians.

April 2025

Parkinson's Awareness Month

Together we advocate for Parkinson's to be taken seriously by decision makers and to help reduce stigma.

Parkinson's:

- can affect younger people, it's not just an older person's disease
- is not just a tremor, there are around 40 possible symptoms
- symptoms are not always visible
- affects every part of daily living and drains energy
- impacts more than the individual diagnosed, it affects the whole family
- can limit career opportunities
- affects emotions and confidence
- can make leaving the house more stressful.
