

Parkinson's is the world's fastest growing neurological condition affecting 219,000 Australians.

APRIL 2024

Parkinson's Awareness Month

Together we advocate for Parkinson's to be taken seriously by decision makers, and to help reduce stigma.

Parkinson's:

- **can affect younger people, it's not just an older person's disease**
- **is not just a tremor, there are around 40 possible symptoms**
- **symptoms are not always visible**
- **affects every part of daily living and drains energy**
- **impacts more than the individual diagnosed, it affects the whole family**
- **can limit career opportunities**
- **affects emotions and confidence**
- **can make leaving the house more stressful.**

**You can help lift the lid off Parkinson's,
